Environmentally Acceptable Lubricants

EAL HYDRAULIC FLUIDS

Athen Marine

HYD EAL 32 | HYD EAL 46 | HYD EAL 68 | HYD EAL 100

High-performance Environmentally Acceptable Hydraulic Fluids (EAL) formulated with biodegradable synthetic esters and advanced anti-wear additives. Designed to meet the stringent requirements of marine and offshore applications.

STERN TUBE

Stern EAL

68 | 100 | 220

Range of environmentally sensitive lubricants, formulated from natural and renewable esters, which provide excellent lubrication in both neat and emulsion forms. Recommended for the bearing and seal manufacturers for regular running in the sterntube.

GEAR

Gear EAL

68 | 100 | 150 | 220

A range of environmentally sensitive, high-performance, extreme-pressure (EP) gear oils formulated from fully saturated esters. Designed particularly for marine thruster and CPP applications.

GREASE

Athen Marine Grease EAL

NLGI 0-2

Marine biodegradable grease based on renewable esters, designed for environmentally sensitive applications such as rudder stocks, propeller hubs, and propeller caps.
